

Umbrella Kit

I recommend using a low temp glue gun.

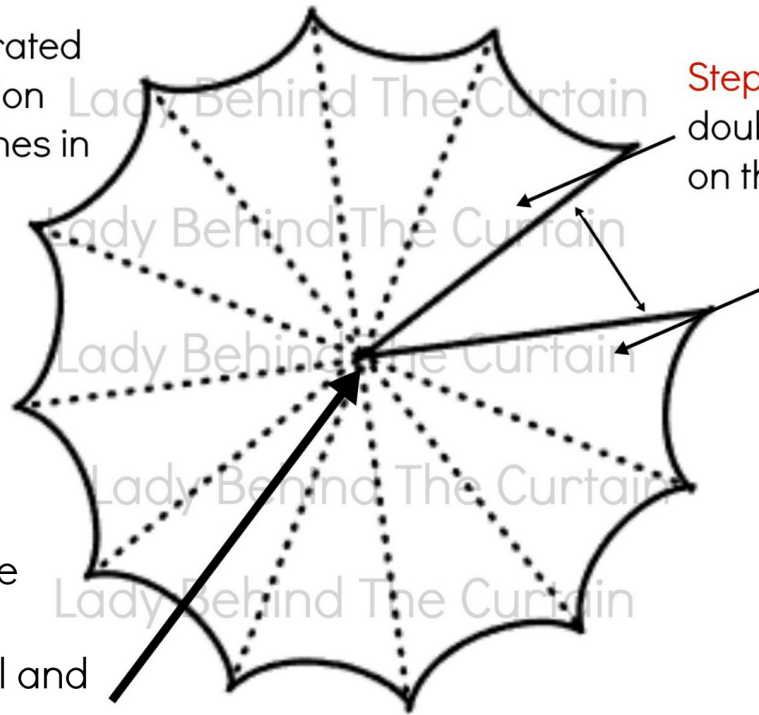

Step 1: Fold all the perforated areas in the same direction (represented by the dashes in the picture).

Step 2: Hot glue or double stick tape here on the top.

Step 3: Bring the underside over the top and press to adhere.

SUPPLIES:

- scissors
- folding tool
- sharpened dowel (for large umbrellas)
- bamboo skewers(for small and mini)
- small beads
- low temp glue gun

Step 4: Poke the tip of the sharpened dowel into the point of the umbrella. Add a small drop of hot glue, add the bead and hold in place until cool.

If you don't have a print and cut machine then I recommend using a folding tool (found at most craft stores)

TIP: If using the umbrella with lines make sure the lines are under the umbrella.
